

What should you do when getting children to do housework? Accept no excuses. Don't worry if you must repeat yourself over and over again. If you're **spending** more time getting the child to do this job than it would take to do it yourself, then you're doing it right. Can an **allowance** help? Maybe. But if you're trying to teach kids to share the responsibility of a home, then paying them for routine housework does not send the right message. Just tell them if they don't want to live in an **untidy** room, they must do their share.

Passage 2: Smart Cities

Would you like to live in a city where buildings turn the lights off and say **good night** to you, and self-driving cars will find the nearest parking space themselves? Although it might sound a little far from you, living in a "smart" city like this could happen **sooner** than you think.

Great changes have **taken place** in towns that we have lived in for **centuries**, while completely new cities are being built. One such place is the city of Songdo (韩国城市). In every home there will be a "telepresence **system**—allowing users to **control** the heating and locks, take part in video meetings, turn up or down the **soundtrack** and **receive** education, health care and **government** services. Around the city, **escalators** will only move when someone is on them, and offices and schools will all be **connected** to the system.

The great mind behind Songdo is from the **company** Cisco. In fact, technology companies around the world such as IBM, Siemens and Microsoft are already in the **business**.

“About 75% of the world’s **population** will live in cities by 2050, so cities will need to be more **modern** to deal with the coming problems. Making cities smarter is one way out, and I think this will in turn make cities greener”, said Dan Hill, head of a **research** company.

By investing in public spaces, smart cities can be places where people want to spend more time. The city of Barcelona has brought smart technologies **up to date** by implementing a network of fiber optics throughout the city, providing free high-speed Wi-Fi. By integrating smart water, lighting and parking management, Barcelona saved over \$ 100 million of city funds and created **approximately** 47,000 new jobs in the smart technology industry.
