

Passage 2: Eggs: Storehouses of Nutrients

Around the world, eggs have been a breakfast **staple** (主食) for all good reasons. After all, an egg is a storehouse of **vital nutrients**, making it an **essential** part of a healthy diet. And for those who are afraid of having this high-energy food because you're worried that it will add to your weight, remember, one egg **contains** about 80 calories

and about five grams of fat. Hence, smart **consumption** is a far healthier **option**.

Eggs are a well-known rich source of **protein**—an important building block of bones, muscles, skin, and blood. Our body **relies** on protein to build and repair **tissues** as well as making other body **chemicals**. Unfortunately, unlike fat and **carbohydrates** (碳水化合物), the body does not store protein, and therefore has no **reservoir** to draw on when it needs a new **supply**. Thus, eggs are the perfect sources and a smart food choice for those who reduce their intake of carbohydrates to lose extra weight.

Another important nutrient that is found **abundantly** in egg white is **riboflavin** (核黄素) or vitamin B2. And for those who are wondering about the benefit of this nutrient, riboflavin is a water-soluble **vitamin** that is **involved** in vital **processes** in the body and is necessary for normal **cell** function, growth, and energy **production**.

The yolk, which many people **avoid** out of fear, is actually very healthy, if **consumed** in **moderation**. Mainly made up of fat, there are only 1.33 grams of **cholesterol** (胆固醇) per 100 grams of yolk. In addition, the **yolk** is a rich source of vitamin A, B vitamins, **calcium**, **phosphorus** (磷) and **iron**. **Incidentally**, the iron found in the yolk is easily **digested**

in the body. According to nutrition experts, people can eat one whole egg every day without harming their cholesterol and blood fat levels. However, for those who like eggs, they can reduce fat by having one whole egg and only the whites of the rest of the eggs with a thin **slice** of bread.
